C) Test Cases

Test Case 1: Guest Accessing Cart

Guest can search products and view them, but upon adding items to cart, they are redirected to customer login page

Test Case 2: Customer Adding Product

Only customers can add items to Cart. An employee would have to login as customer first, before being able to add anything to cart.

Test Case 3: Unauthorized Access to Employee Pages

Firstly, customers can not access employee pages through the navigation panel unless they have a valid registered employee account. And if they try to access through the link `Customer_Catalog.aspx`, then they will be redirected to the EmployeeLogin Page.

All of the above test cases work fine on the application.
